The broad process followed can be enlisted as under:</p> <ul style="list-style-type: none"> <li>Detailed credit research is undertaken for each investment in the portfolio which includes qualitative and quantitative assessment of various issuers.</li> <li>Qualitative assessment involves analyzing the business profile of the issuer on several parameters including market share, competitive positioning, management quality, business diversification, regulatory environment, rating agency views and event risk if any.</li> <li>Quantitative assessment involves analyzing the financial profile of the issuer on parameters like balance sheet size, cash flow adequacy, debt servicing capability, working capital requirements, funding flexibility and capital adequacy.</li> <li>Typical ratios used in credit analysis are debt to equity (leverage), short term debt to total debt, interest coverage ratio, total debt to EBITDA, current ratio, EBITDA margin and net profit margin.</li> <li>To ascertain exposure limits on the issuer, we consider the total debt outstanding for the entity and apply a certain percentage based on our internal grading criteria. The same is also restricted to a certain percentage of our own debt net assets. The investment limits so derived are strictly adhered to.</li> </ul> |          | Investments   | Indicative Allocation (% to net assets) |     | Risk Profile   | Minimum | Maximum | Debt Securities (excluding money market instruments) | 80 | 100 | Low to medium | Money Market instruments | 0 | 20 | Low to medium | Government Securities | 0 | 20 | Low | Instruments | Credit Rating |  |  |  |  |  | AAA | AA | A | A1+ | BBB | Not Applicable | CDs | - | - | - | - | - | - | CPs | - | - | - | 0%-5% | - | - | NCDs | - | 95%-100% | - | - | - | - | Any other instruments | - | - | - | - | - | - |

| <p><b>Investment Strategy</b></p>                    | <p>For the purpose of achieving the investment objective, the Scheme will invest in a portfolio of Debt and Money Market securities, maturing on or before maturity of the Scheme.</p> <p>The AMC has an internal policy for selection of assets of the portfolio. The portfolio is constructed taking into account ratings from different rating agencies, rating migration, credit premium over the price of a sovereign security, general economic conditions and such other criteria. Such an internal policy from time to time lays down maximum/minimum exposure for different ratings, liquidity norms, and so on. Through such norms, the Scheme is expected to maintain a high quality portfolio and manage credit risk well.</p> <p>Investments may be made in instruments, which, in the opinion of the Fund Manager, are of an acceptable credit risk and chance of default is minimum. The Fund Manager will generally be guided by, but not restrained by, the ratings announced by various rating agencies on the assets in the portfolio.</p>   |          |               |   |     |                |         |         |  |    |     |               |                          |   |    |               |                       |   |    |     |             |               |  |  |  |  |  |     |    |   |     |     |                |     |   |   |   |   |   |   |     |   |   |   |       |   |   |      |   |          |   |   |   |   |                       |   |   |   |   |   |   |

| <b>Risk Profile of the Scheme</b>                                      | <p>Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:</p> <p>a) The portfolio of Kotak FMP Series 181 will comprise of securities issued by central and state government as also debt &amp; money market instruments issued by corporates as mentioned under the paragraph 'How will the Scheme allocate its assets'. All such securities will mature on or before maturity of the scheme. As the securities are held to maturity, the interest rate risk is significantly mitigated. The debt securities issued by the corporates do carry a credit risk as also the liquidity risk.</p> <p>b) The Scheme will invest entirely in Debt/ Money Market Instruments and Government securities. Liquidity in these investments may be affected by trading volumes, settlement periods and transfer procedures. These factors may also affect the Scheme's ability to make intended purchases/sales, cause potential losses to the Scheme</p>   | <p>and result in the Scheme missing certain investment opportunities.</p> <p>c) Different types of securities in which the scheme would invest as given in the SID carry different levels and types of risk. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern. E.g. corporate bonds carry higher amount of risk than government securities. Further, even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA rated.</p> <p>d) The market price of Kotak FMP Series 181 like any other listed security, is largely dependent on two factors, viz., (1) the intrinsic value of the unit (or NAV), and (2) demand and supply of units in the market. Sizeable demand or supply of the units in Exchange may lead to market price of the units to quote at premium or discount to NAV. Hence the price of the units is likely to hold significant variance (large premium or discount) from the latest declared NAV all the time.</p>   |                                       |                                |                             |   |               |               |             |   |               |        |             |   |               |         |             |   |           |        |             |   |        |               |             |   |        |         |             |   |           |         |              |   |           |               |              |   |
